

Better Care Fund – Integration Executive

Integration Resources - July 2018

A. Using data in the NHS: the implications of the opt-out and GDPR

Patient data is vital to the day-to-day running of the NHS, from planning health services, improving diagnosis and treatment and evaluating the effectiveness of policy. As new GDPR and the national data opt-out come into force, Harry Evans looks at how the NHS uses patient data beyond individual care and what the implications of the new rules might be.

B. The Digital Health & Care Institute Report on International Practice On Digital Apps

This landscape review provides an overview and examination of current international initiatives and practices to develop, assess and evaluate the use of mobile health and wellbeing apps and services. To accomplish this, seventeen academic, national, regional and international initiatives have been identified, examined and compared, detailing their wide-ranging approaches and scopes

C. BBC article: Babylon claims its chatbot beats GPs at medical exam

To read this BBC article, which is balanced by the views of the Royal College of General Practitioners which disputes the abilities of Babylon's software, please visit <https://www.bbc.co.uk/news/technology-44635134>

D. The 100-year life: the role of housing, planning and design

One in three children born in the UK today can expect to live to 100 – presenting challenges and opportunities to innovate. Co-producing housing, planning and design solutions with older people can support people to live independently in their own homes for longer – and generate new markets. This report – written in conjunction with Design Council and the Centre for Ageing Better – sets out recommendations for central and local government, builders, planners, designers and lenders.

E. The NHS at 70

To mark the BBC's coverage of the NHS's 70th birthday in July 2018, researchers from The King's Fund, the Health Foundation, the Institute for Fiscal

Studies and the Nuffield Trust have joined forces for the first time, using combined expertise to shed light on some of the big questions about the NHS.

The four organisations have been asked by the BBC to look at five key topics, covering the relative strengths and weaknesses of the health service, the state of social care, NHS funding, the public's expectations of the NHS and the potential of technology to change things in future. This project and the reports we have produced are intended to inform the national conversation about the past, present and future of the NHS.

G. System under strain: why demand pressures are more than a winter phenomenon

This report from the NHS Confederation shows that increases in demand for health care services are not restricted to particular parts of the service and specific times of the year. It describes ways in which increasing demand in one part of the system can affect the performance of other NHS services. It outlines how some NHS and social care providers have adapted their services to enable patients and service users to access care more efficiently.

H. Risk and reward sharing for NHS integrated care systems

This report outlines approaches to risk and reward sharing as they might apply to integrated care systems in the NHS. It is designed for those involved in establishing NHS integrated care systems, particularly NHS directors of finance, directors of strategy and their teams.
